

H-E-B Security Infrastructure Transformation

ESTABLISHING A SYSTEM OF RECORD WITH SITEOWL

Driving Visibility, Standardization, and Scalable Growth

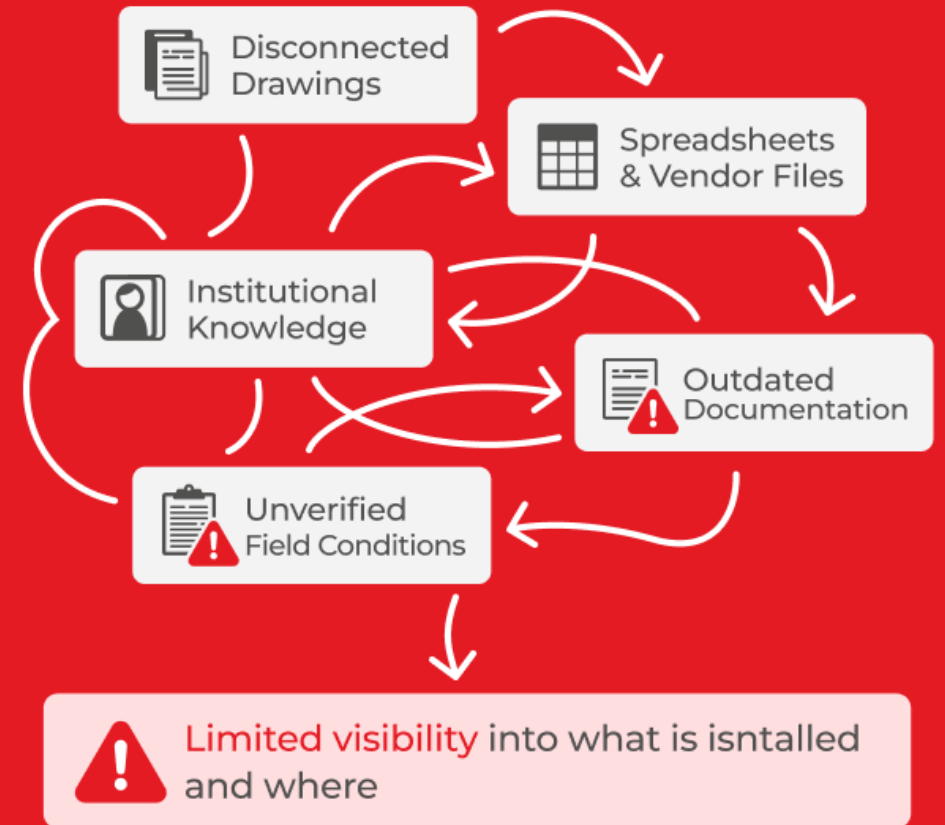

The Problem

Security Without a System of Record

- **No centralized visibility** across ~500 facilities
- **Data spread** across vendors, drawings, and spreadsheets
- **Inconsistent** standards and documentation
- **Heavy reliance** on institutional knowledge

Security Infrastructure **Without** a System of Record

The Core Issue

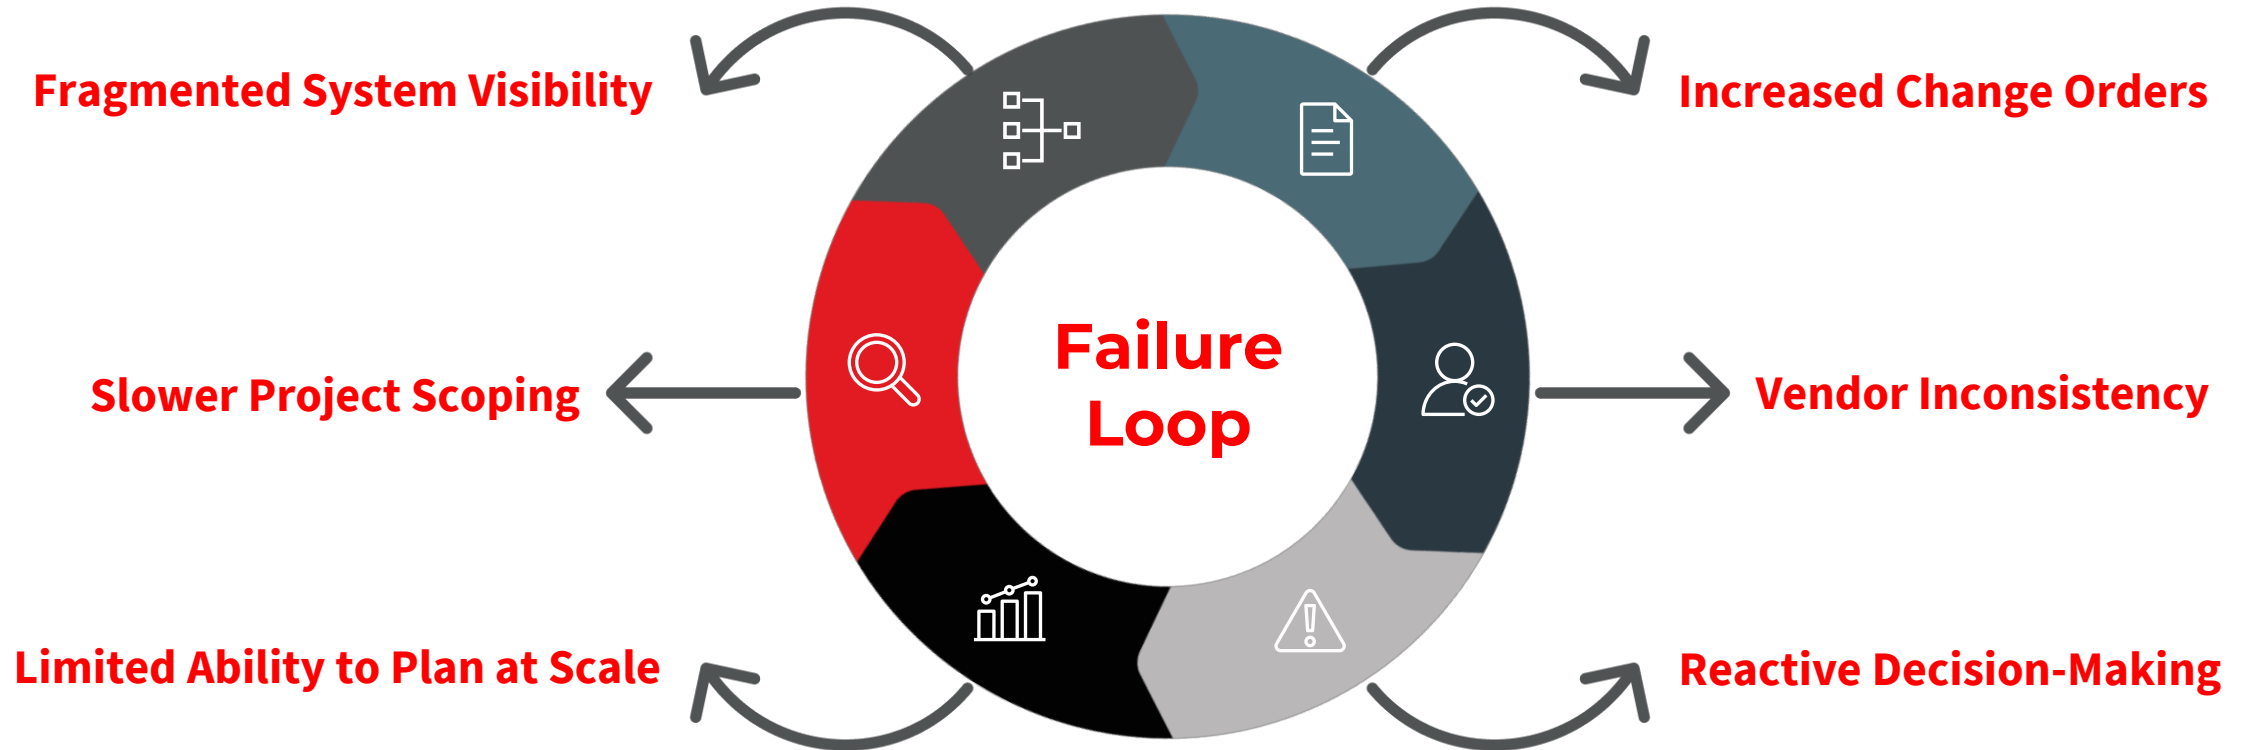

No Single **Source of Truth**

Security infrastructure data is fragmented, inconsistent, and difficult to trust:

- **What is installed?**
- **Where it is?**
- **Who installed it?**
- **Does it meet standards?**

Why This Happens

A Cycle That Repeats

When data isn't centralized or maintained, problems don't get solved — they compound.

Each project inherits the same gaps, creating a continuous loop of inefficiency, inconsistency, and rework.

Why Large-Scale Security Programs Break Down

At H-E-B's scale (500+ facilities), **security programs fail** when they run on assumptions instead of accurate data

Result: **70% of projects fail to meet expectations**

How to beat the odds?: Create a single, trusted system of record for the security environment

The Solution

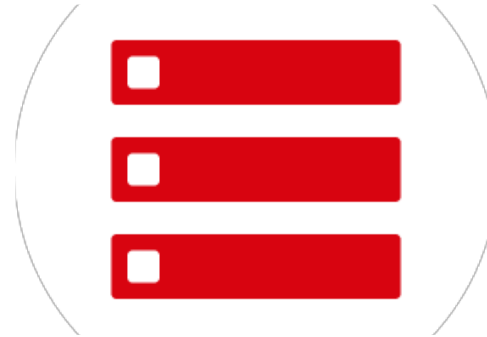

Introduce SiteOwl as a System of Record

Centralized platform for
all security assets

Device-level visibility
across the enterprise

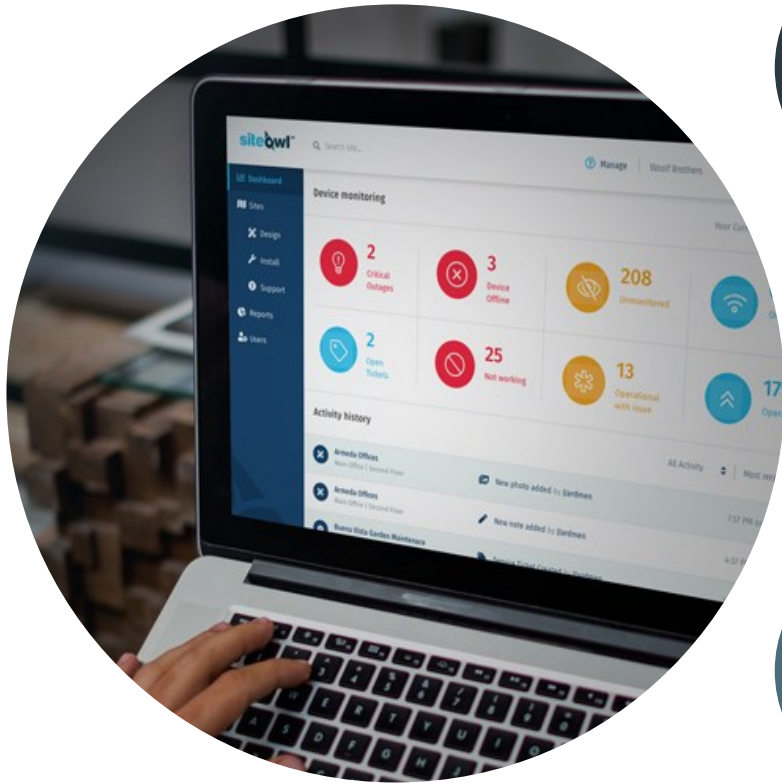

Standardized,
structured data

Real-time access to
accurate information

What SiteOwl Manages

Video Surveillance

Cameras, models, mounting, lifecycle

Intrusion Detection

Panels, zones, sensors

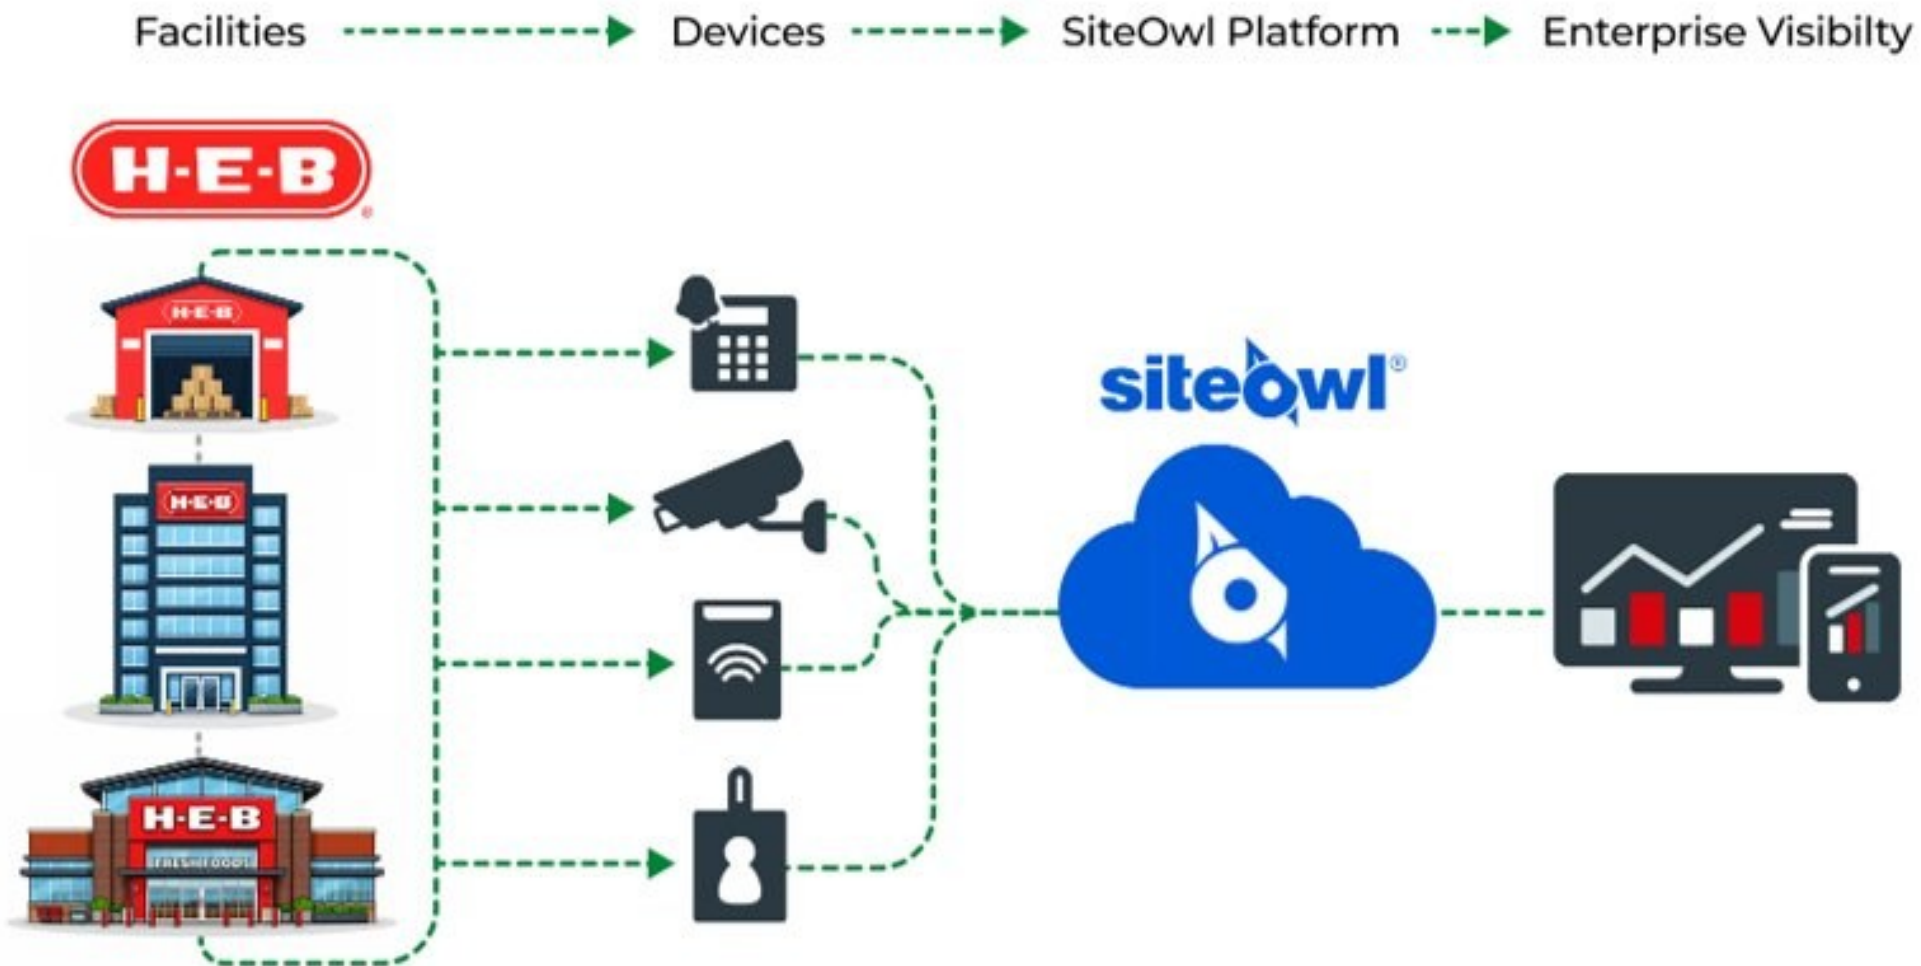

Access Control

Doors, readers, panels, compliance

SiteOwl Structure

Introduce SiteOwl as a System of Record

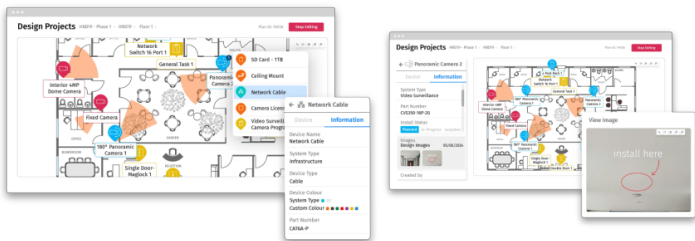

A Clear View of Every Security Asset

A System of Record for Security Infrastructure

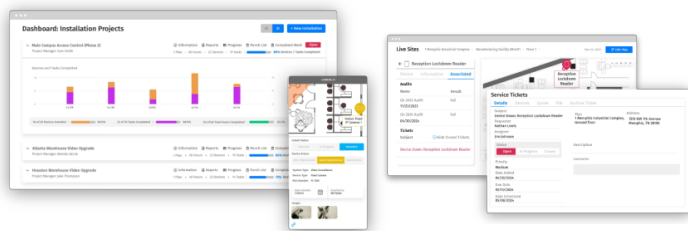

SiteOwl is a centralized platform that creates a complete, accurate, and continuously maintained record of all security assets across the enterprise.

Maintain

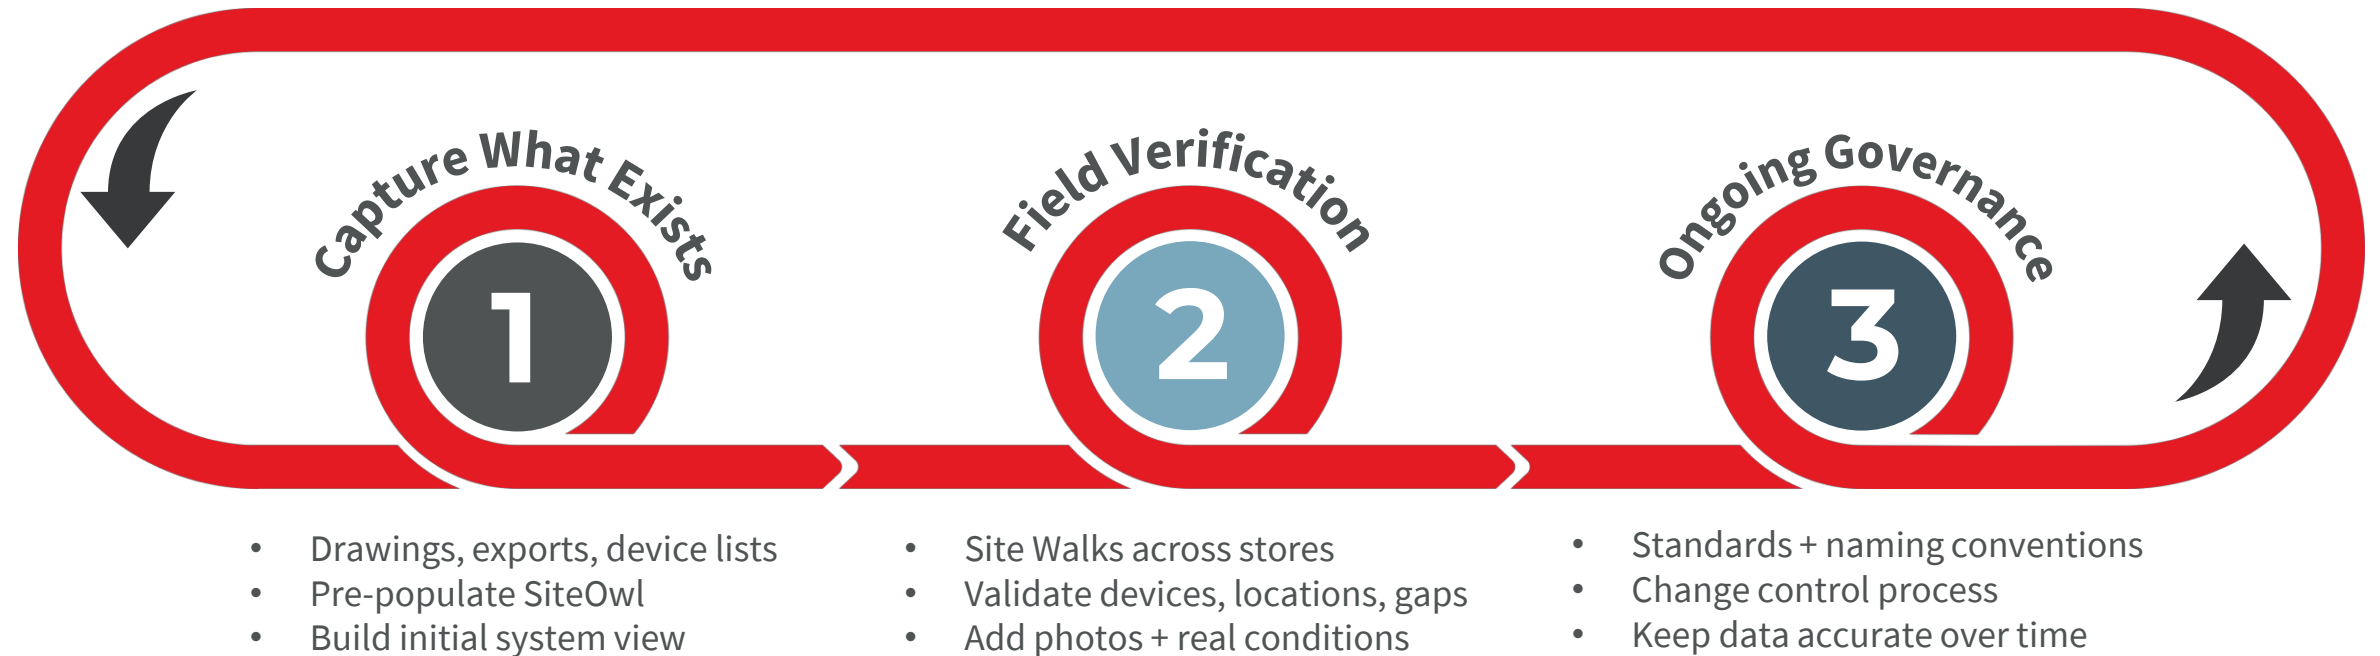

Plan

How Do We Get There?

Build a System of Record

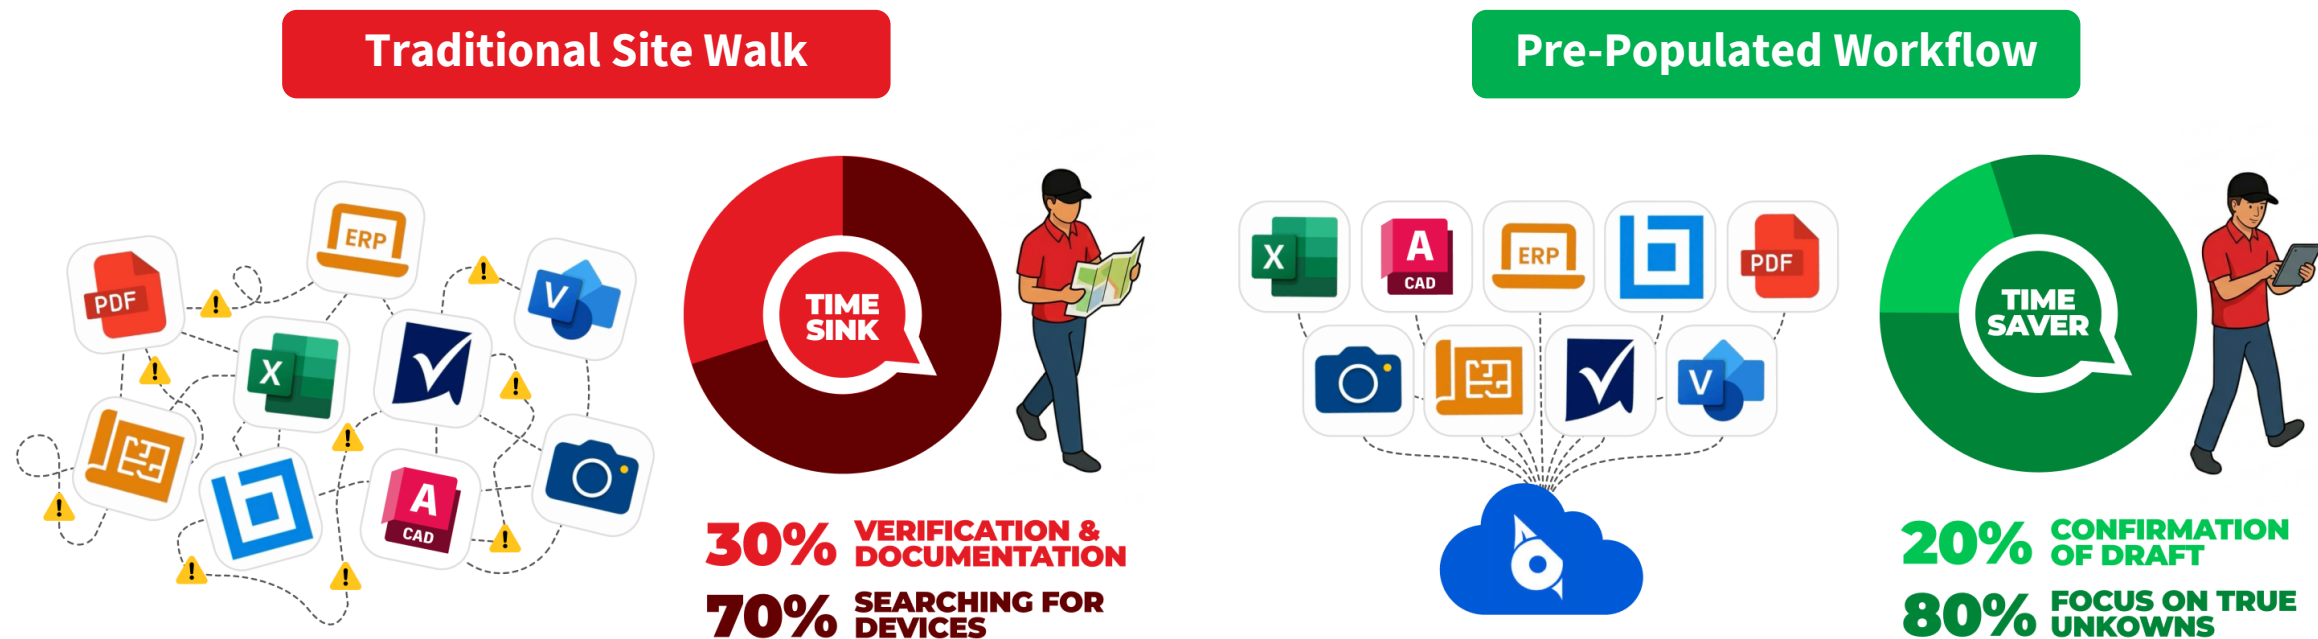

A governed, continuous system that captures, verifies, and keeps data accurate.

Pre-Populated Data Transforms Field Work

Before stepping on-site, existing system data is used to build a preliminary foundation within SiteOwl.

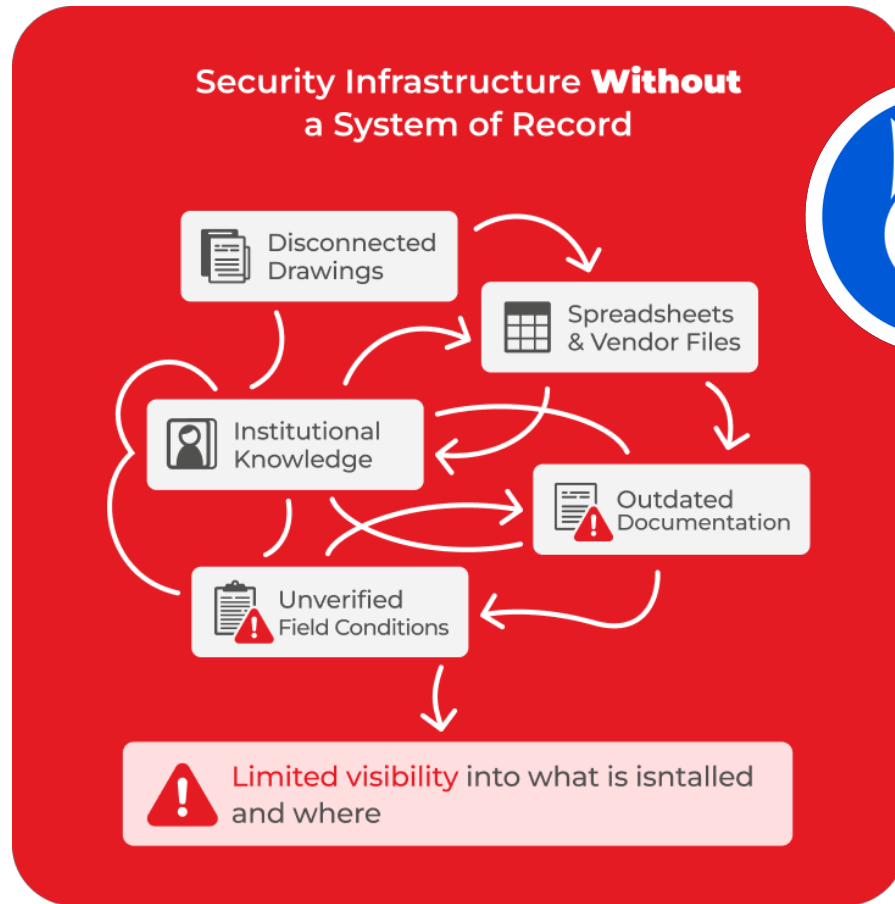

By pre-populating SiteOwl with existing data, site walks shift from discovery to validation—reducing time in the field and improving accuracy.

Service Comparison & Program Investment

A structured approach to deploying, validating, and sustaining SiteOwl across the enterprise.

CAPABILITIES	SERVICE 1 BASELINE	SERVICE 2 MANAGED	SERVICE 3 FULLY SUPPORTED
	Foundation & Tools	Managed Support Governance	Operational Program Support
Executive Launch Program	•	•	★
Drawing and System Data Collection	•	•	★
Security Asset Documentation	•	•	★
Environment Icon Each Location	•	•	★
Security Standards	H-E-B	H-E-B	H-E-B & 3Sixty
SiteOwl Drawings & Designs	H-E-B	H-E-B	3Sixty
New Device Data Entry	Vendor	Vendor	Vendor
Change Management	H-E-B	3Sixty	3Sixty
Vendor Accountability – Certification Process	H-E-B	H-E-B	H-E-B
Scope & Data Collection for Bid Requests	H-E-B	H-E-B	3Sixty
Quality Control	H-E-B	H-E-B	3Sixty
Internal & Vendor Training	•	•	★

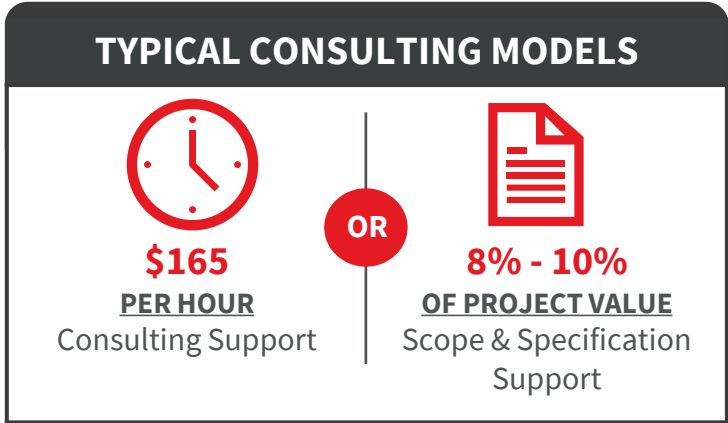

The Hidden Cost of Traditional Consulting Models

Specification-based approaches often shift responsibility downstream to the bidder.

At scale, this becomes a recurring cost.

 **Risk isn't removed —it's moved downstream,**
Leading to RFIs, bid dis qualifications, disputes, and change orders.

THE COST ADDS UP QUICKLY

PROJECT TYPE		BASE COST	+8%	+10%
	New Store	\$380,000	\$410,400	\$418,000
	Capital Projects	\$2,000,000	\$2,160,000	\$2,200,000

ANNUAL IMPACT AT SCALE

PROJECT TYPE		VOLUME	8% COST	10% COST
	New Store	15	\$456,000	\$570,000
	Capital Projects	3	\$480,000	\$600,000
TOTAL ANNUAL CONSULTING COST			\$936k	\$1.17M
